Report Overview

Welcome to the DataHub Data Dictionary. This resource provides an interactive way of navigating through the various datasets found in DataHub. The following pages are available:

- **All Assets** - provide a full list of tables and views available in DataHub which have been documented in the Data Dictionary. Each table will have an accompanying description detailing its purpose and use. Further details can be found by drilling through to the table overview. Use the free text filter to search across the dictionary, or alternatively filter by table or tag.
- **All Datasets / All Areas** - full list of assets for each dataset or area that has been defined. Note a table may appear in more than one category.
- **Table Overview** - provide specific details on a table such as it's column list or list of changes related to the table. Get to the table overview by selecting a specific table within the All Tables, All Datasets or All Areas pages and using the drill through button located in the bottom left.
- **Change Log** - provides a dated change history for amendments within DataHub.
- **Data Quality** - highlights data quality issues. This is for internal use to help ensure the dictionary is kept up-to-date.

Terminology

- **Tags**: used to help search through the dictionary. Tags can come under different tag types but the main ones are Dataset (such as ECDS, or MSDS), Area (such as PHM, Acute, Maternity or UEC), or Metadata phrases.
- **Bus Matrix** - shows the relationships between tables. See which tables link to other tables and the columns the linking happens on. Available on the Asset Overview page.
- **Certification** - tables will be allocated a certification; either bronze, silver or gold. Bronze are normally base tables, silver will be tables that have had some transformations and gold will be full transformations and modelling.

Contact Us

If you have any questions, queries, requesting a definition change, or the addition of a DataHub asset, please do not hesitate to contact the Data Engineering Team on nwicb.dataengineering@nhs.net

Navigating the Report

Interactive buttons on the left of each page allow you to navigate to different screens of the report, and buttons on the top allow you to clear the filters on the current page and navigate back to previous pages.

The data in the report is interactive - clicking a row within a table will activate the Asset Details button, which allows you to drill through to another page for further information.

Data in the report can also be filtered using the available drop down filters and Search functionality at the top of each page.

If you have any queries please contact the team email address below, and your query will be routed to the appropriate team member.

Report Version History

Date	Version	Change Notes
06/03/25	v1.0	Initial Deployment
12/06/25	v1.1	Included links to national guidance
17/11/25	v1.2	Remapped after internal migration, assets now include ERD links

Asset Details (select from list)

Asset Name	Database	Schema	Description	# Models ▼
DimLocation	DATA_HUB	DWH	A list of all the locations and associated Place, ICB, County amd NHS Region codes	10
DimOrganisationAndSite	DATA_HUB	DWH	Master table holding information about organisations and sites found within DataHub's datasets. Information is taken from the ODS, https://www.odsdatasearchandexport.nhs.uk/?search=generalorg&query=RJR . Each organisation will have a default site which has the organisation code as the site code. This allows to join to this table using columns with a mixture of organisation codes and site codes.	10
DimOrganisation	DATA_HUB	DWH	A view of OrganisationAndSite showing only the latest record per organisation; hence one row per organisation code coming from the ODS. Site records and assoicated details are not found in this.	9
DimDate	DATA_HUB	DWH	Date table to allow filtering and grouping of activity by predetermined groupers - for example financial year - Financial quarter - Financial Month, etc	8
DimPerson	DATA_HUB	DWH	Person demographics for people within the ICB system. To support reporting, the latest risk stratification, GP and LSOA details are included. This table is created primarily from the primary care systems TPP, EMIS and PDS. Secondary information is taken from other source systems such as SUS, UEC, MSDS, Adult Social Care, and CHC if they contain people not found in primary care sources. If a person is found in secondary sources only, then the source is taken based on the latest activity date. Person records are categorised as pseudo or non-pseudo. For non-pseudo, records are identified from a source's local patient identifier, provider and source system. These people are classified as unverified, as it is not possible to track them across different activity within the system. These people should not be used for PHM specific reporting since they will not be trackable across primary care coding and other system sources. Rather they should be used when looking at service specific analysis.	8
